### **TITLE WILDLIFE SIGHTING SUMMARY REPORT**

**Racheal Anak Rosedy  
FMC (CONSERVATION UNIT)**

## SUMMARY

Accidental Wildlife Sighting Record is not only depending on direct sighting (viewed directly) but also calls and signs or tracks of the animals. Any animals that were encountered at any time in Gerenal FMU area are recorded except during the walk, drive or work with the purpose of doing wildlife monitoring task which will be counted as the Schedule Wildlife Sighting or Monitoring.

Accidental Wildlife Sighting Summary Report is prepared for consecutive three (3) months. However, this report summarizes for the month April to June 2019 as there are no record for the month of January to March 2019.

A total of 54 species of animals were sighted in Gerenal FMU area which consists of 16 species of mammals, 29 species of birds, eight (8) species of herpetofauna and one (1) species of insect. The most frequent species recorded are the Bearded Pig, Pig-tailed Macaque and Rhinoceros Hornbill followed by Bushy-crested Hornbill and Long-tailed Macaque. Some species may consider as frequently encountered species as the species move in group with many individuals counted per record. The common residents of Gerenal FMU are the Eurasian Tree Sparrow, Barn Swallow and Pacific Swallow.
